WHAT IS DRYLET’S AQUA ASSIST?
Aqua Assist is a dry-to-the-touch engineered substrate specifically formulated with patented Micro Bioreactor (MBR) particles seeded with mixed microbial cultures beneficial for wastewater treatment plant (WWTP) operations. Every kilogram of product provides about 14 hectares of area loaded with billions of beneficial microbes for wastewater treatment. Drylet’s MBR particles provide bacteria with an ideal environment to reproduce at significantly accelerated rates, consuming and converting organic waste directly to gas and water.

HOW TO USE DRYLET’S AQUA ASSIST?
It is added daily as part of your routine wastewater facility maintenance program. A daily dose of 1 kilogram per 3,800 cubic meters per day reduces sludge volume up to 50%.

WHY DRYLET’S AQUA ASSIST?
Aqua Assist is field-proven to reduce biosolids, sludge hauling costs, polymer usage, and ammonia while increasing plant carrying capacity and compliance at plants ranging in size from a few dozen cubic meters per day up to 19,000 cubic meters per day. The biological process, however, is inherently scalable to plants of any size. Aqua Assist requires no commitment to new or expensive equipment. Product can be easily applied at any facility into the aeration basin or digester.

Humans generate waste faster than nature can remediate. Drylet is changing that equation.

DRYLET
helping nature do its job™
Case studies of a 15,000-m$^3$/day and a 19,000-m$^3$/day WWTP show sludge reductions between 24% and 41%, and significant savings in operating costs.

Dry solids reduction benefits at 15,000-m$^3$/day Atascocita MUD #109:

- 29% inflation adjusted reduction in hauling costs
- 43% savings in polymer usage
- extended equipment life cycle with fewer repairs and fewer maintenance hours
- x3 carrying capacity increase without impacting effluent quality and compliance requirements
