

B BIO REACT DRAIN

 **DRYLET**
www.drylet.com

Bio React keeps kitchen drains free-flowing and odor free. Naturally.

WHAT IS BIO REACT DRAIN?

Bio React Drain is a dry-to-the-touch powder specifically formulated with patented Micro Bioreactor (MBR) particles. These benign particles are loaded with mixed microbial cultures that have been especially selected to remediate commercial kitchens and restaurant environments, including clogged floor and sink drains. Because it can solve some of the most difficult grease and grease trap issues, Bio React Drain can significantly reduce odor in drains and will save users the costs associated with regular hydro jet services. Containing no chemical ingredients and no genetically modified organisms, Bio React Drain delivers all of these benefits without any adverse impact to the environment.

HOW DOES BIO REACT WORK?

Protected in the particles, beneficial bacteria reproduce at significantly accelerated rates, consuming solids and foam, thus reducing odor and gas build-up.

ADVANTAGES OVER LIQUID TREATMENTS

- >100x higher microbial counts over liquid bioremediation products
- Requires no premixing
- Adheres to solids in water
- Delivers millions of micro bioreactors (MBR), which contain billions of microbes, directly to the fat, oil and grease layer.
- MBR embed in fat, oil and grease layer and produce millions of additional colonies that keep the sludge liquified.

HOW TO USE BIO REACT

INITIAL APPLICATION

Apply 1 full scoop of Bio React into each floor drain and sink drain throughout the restaurant, including restrooms. Follow each drain application with 1/2 cup of room temperature water. Also add 3 tablespoons of Bio-React into each soda dispenser drain.

DO NOT USE HOT WATER.

ROUTINE MAINTENANCE

After initial application, apply product to soda dispenser weekly and at least one sink drain in location weekly.
